

Binance Orderbook Analysis Report for Backtesting

Generated at: 2025/04/29

Purpose of the report:

The minimum success rate of the strategy is calculated by giving the Limit (Target) price to be determined to amortize the determined Stop (Loss) price. In this way, these parameters can be used to determine that the strategy entered the purchase and sale from the right place during the backtest and to determine that the strategy is profitable. If the success rate as a result of the backtest is below the specified value, it may indicate that the strategy is unsuccessful. Or it indicates that the current parameters in the strategy should be changed. If the success rate is higher than the value specified in the table, the strategy is applicable and profitable.

Finding the % Gap between AskLimit and BidLimit for a buy-sell scenario for a certain amount

Market Taker order size parameter = \$1000

Symbol	AskLimit Price	BidLimit Price	Gap(%)
